Agile Quality Management – Oxymoron or Axiom?

Presenter/Company

David Evans, SQS

Session Format

Workshop Tutorial Industrial project papers Academic presentation

Instructional Skill Level

Introductory Intermediate Advanced

Target Group

Test Managers, Quality Managers, Development Managers

Key Points

- Software Quality Management
 - Agile Testing
 - Agile Software Development
 - Quality Governance
-

Abstract

The growing popularity of Agile Software Development seems to divide the quality community. Some see it as playing fast-and-loose, dropping all the established doctrines of quality management best practice. Others embrace it as dynamic and results-oriented, with a refreshing emphasis on testing and customer collaboration. Love it or hate it, you can't ignore it – agile is now in the mainstream and there is little sign of it being a passing fad.

The challenge of Agile is how to preserve the same levels of Quality Governance over software and process quality that are normally associated with heavyweight methods, when the emphasis is on travelling light, responding quickly and embracing change. In this talk I examine a number of problematic conundrums in agile methods that seem to fundamentally challenge the traditional roles and expectations of the Test Manager, and attempt to unite the 'axiom' and 'oxymoron' viewpoints. Finally I share a set of agile quality principles and propose an agile quality governance framework.

Biography

An IT professional with over twenty years' experience in both software development and testing, David Evans is currently Director of Methodology at SQS, where he has been the key intellectual force behind SQS's Software Quality Methodology (SQM). He has had several papers on software testing published in international business journals and is a regular presenter at testing and software quality conferences. David is a thought leader and evangelist on testing in Agile development environments, and has consulted on this topic for organisations in the UK, USA, Europe, India and South Africa. For two years he actively led an internal agile team developing and testing the Microsoft .NET

web application “TestStrategist” for SQS, which won the Information Age award for “Most Innovative use of IT in Professional Services”. David grew up in Australia, gaining a first class honours degree in Computing from Canberra University. He now lives and works in the UK.
